

## General-purpose low voltage comparator

### Features

- Supply operation from 2.7 to 5 V
- Low current consumption: 20  $\mu$ A
- Input common mode range includes ground
- Wide temperature range: -40°C to +85°C
- Low output saturation voltage
- Propagation delay: 200 ns
- Open drain output
- ESD tolerance: 2 kV HBM/200 V MM
- SMD packages: SC70-5 and SOT23-5

### Applications

- Mobile phones
- Notebooks and PDAs
- Battery supplied electronics
- General-purpose portable devices
- General-purpose low voltage applications

### Description

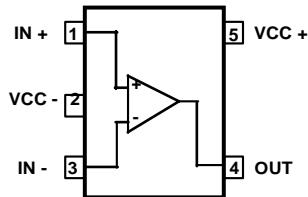

The HT331V is a single and low voltage version of industry standard HT339V and HT393V. It can operate with a supply voltage ranging from 2.7 to 5 V, and exhibits a lower current consumption than its predecessors HT339V and HT393V. This device is a perfect choice for low-voltage applications.

The device is available in both SOT23-5 and SC70-5 packages, making it ideal for applications where space saving is a constraint. The SC70-5 package is approximately half the size of the SOT23-5.

**HT331V**

**Pin connections (top view)**

The HT331V is designed to operate in the temperature range of -40°C to +85°C. It is then suitable for a large variety of applications.

	Charged device model (CDM) <sup>(6)</sup>	1500	
	Latch-up immunity	200	mA

1. All voltage values, except differential voltage, are referenced to  $V_{CC-}$ .
2. The magnitude of input and output voltages must never exceed the supply rail  $\pm 0.3$  V.
3. Short-circuits can cause excessive heating. These values are typical.
4. Human body model: a 100 pF capacitor is charged to the specified voltage, then discharged through a 1.5 k $\Omega$  resistor between two pins of the device. This is done for all couples of connected pin combinations while the other pins are floating.
5. Machine model: a 200 pF capacitor is charged to the specified voltage, then discharged directly between two pins of the device with no external series resistor (internal resistor < 5  $\Omega$ ). This is done for all couples of connected pin combinations while the other pins are floating.
6. Charged device model: all pins and package are charged together to the specified voltage and then discharged directly to ground through only one pin. This is done for all pins.
